

$H_0(\omega)$= [$(1+R_2/R1 + C_2/C1)^2 + (\omega\ C_1\ R_2 + 1/(\omega\ C_2\ R_1))^2]^{-1/2}$

if R_1=R_2=R and C_1=C2=C and τ=RC we get

$$H_0(\omega) = [\ 9+(\omega\tau + 1/(\omega\tau))^2\ ]^{-1/2}$$

The minimum is for $\omega\tau$=1 for which: $H_0^{min} \approx 0.72$.
